

Gages made to measure up

(Sizes and prices listed below)

Widely used by many industries as gages to precisely measure clearances and as shims to accurately set spacing, our standard feeler gage is conveniently available in both 12 inch strips and 25 foot coils.

Our steel blades are made of the finest quality high carbon steel. The stainless steel blades are 300 series stainless steel noted for its outstanding resistance to corrosion. Both materials provide stable accuracy and superior wear resistance.

Both materials are in stock in standard 1/2 inch width; some light gage sizes of stainless steel are also available in 1 inch width. All material is permanently marked with the thickness for easy identification. Each package is also marked with the material type and the thickness.

Each 12 inch blade is enclosed in a vinyl sleeve. Standard packaging is 12 blades per box. One inch wide stainless steel requires special packaging.

The 25 foot coils, in sizes .020" and thinner, are each presented in a reusable, clear, round plastic container. In sizes over .020" thick, the coils are packaged directly into the color coded box. Standard packaging is one coil per box. One inch wide stainless steel requires special packaging.
